Consumer categories

Free

Consumer-first entry point

From card discovery to reward calculation to side-by-side comparison - CreditIQ becomes the trusted decision layer for Indian credit-card users.

The investor thesis

Credit cards are growing, but consumer decisioning is broken. CreditIQ turns card choice into a data-driven recommendation engine.

THESIS

Most users choose cards through bank ads, influencer lists or random recommendations. CreditIQ gives every user a personalized card decision layer.

01

Discover

Find cards by bank, category, fee, lounge, cashback and lifestyle.

02

Calculate

Map monthly spend to annual reward value and true benefit.

03

Compare

Side-by-side comparison across fees, benefits and constraints.

04

Convert

Route high-intent users to bank / affiliate / issuer funnels.

The wedge is discovery. The opportunity is becoming the intelligent marketplace for credit-card decisions.

The problem: choosing a credit card is confusing

India has more cards, more issuers and more offers - but the user experience is still fragmented and biased.

Information overload

Users compare annual fees, reward rates, lounge access, cashback caps and eligibility across dozens of cards.

Bank-first discovery

Issuer pages optimize for selling their own product, not for finding the best product for the user.

Hidden value leakage

A card that looks premium may return poor value for a user's actual monthly spend pattern.

No single comparison view

Consumers jump across bank pages, blogs, YouTube videos and spreadsheets before applying.

Low trust recommendations

Affiliate-heavy content often ranks cards by commission, not customer value.

Poor personalization

Most recommendation journeys ignore lifestyle, spend mix, income, category preference and fee sensitivity.

Result: users apply for the wrong card, leave reward value on the table, or abandon the decision entirely.

The solution: a personal credit-card decision engine

CreditIQ helps consumers find, calculate and compare the best card in minutes.

CreditIQ Core

Find My Card
Reward Calculator
Side-by-Side Compare
Live Data Layer

Find My Perfect Card

A guided 4-question flow captures lifestyle, spend behavior and preferences.

Smart Filters

Cards filtered by cashback, travel, rewards, premium, shopping, dining, fuel, business and zero-fee.

Reward Calculator

Users enter monthly spend and see estimated annual value by card.

Compare Mode

Side-by-side comparison across banks, fees, benefits and value drivers.

Product snapshot from the live app

The current build already demonstrates the core investor story: discovery, filters, calculators and comparison in one product.

This is not a content site. It is an interactive decision tool that can become a high-intent acquisition layer for banks and card issuers.

Why now: India is ready for smarter card discovery

Digital payments are mainstream, credit-card usage is rising, and consumers need better tools to optimize benefits.

Digital payment behavior is normal

UPI processed approximately 22,000 crore transactions in calendar year 2025, making digital payments a mass habit.

Credit-card base is expanding

Industry data reported India at roughly 11.5 crore outstanding credit cards in November 2025.

Rewards are now mainstream

Consumers increasingly choose cards for cashback, lounge access, travel benefits, dining and e-commerce offers.

Banks need efficient acquisition

Issuers compete for high-quality customers; decision tools capture users at the point of intent.

AI improves personalization

LLMs and structured data can simplify eligibility, benefit matching and reward optimization.

CreditIQ sits where consumer intent, bank acquisition and payment intelligence meet.

User personas: four high-intent segments

The product can serve mass consumers first, then expand into premium, business and bank partnerships.

New-to-credit users

Need simple guidance, low-fee products and basic eligibility education.

Rewards optimizers

Want the highest annual value across groceries, fuel, dining, travel and shopping.

Premium consumers

Compare lounge access, milestone benefits, travel perks and fee waivers.

Business users

Look for working-capital float, business spends, travel, GST-friendly workflows and reporting.

Bank partners

Need qualified lead flow, sharper targeting and product-level conversion analytics.

Fintech platforms

Can embed card recommendation and comparison as a value-add module.

The same data layer can serve consumers, banks, fintechs and affiliate acquisition partners.

CreditIQ intelligence layer

A structured card database becomes powerful when combined with calculators, user preference graphs and conversion feedback.

Card Data

Fees, benefits, categories, banks, joining offers and constraints.

Spend Profile

Monthly spend across travel, dining, fuel, shopping, business and lifestyle.

Reward Logic

Estimated annual value, break-even fee recovery and category-specific cashback.

Eligibility Signals

Income, geography, credit profile and bank-specific suitability rules.

Comparison Engine

Side-by-side benefit, cost and value explanation.

Conversion Feedback

Clicks, saves, applications and bank partner outcomes feed model improvement.

Moat compounds as the product learns which users select which cards and why.

Business model: free for users, monetized on high intent

CreditIQ can stay consumer-first while monetizing through partners, issuers and embedded financial workflows.

Affiliate / CPA

Earn per approved card application or qualified lead routed to issuers and partners.

Sponsored placement

Banks pay for transparent, labelled visibility across relevant categories.

Premium intelligence

Consumers pay for advanced reward tracking, fee optimization and renewal reminders.

B2B API / widget

Fintech apps embed CreditIQ recommendations into their own user journeys.

Bank analytics

Product-level funnel, competitor comparison and customer preference insights.

Cross-sell rails

Future expansion into loans, wealth, insurance and personal finance recommendations.

The strategic asset is not the page. It is the high-intent decision graph around consumer credit products.

Go-to-market: search, social, banks and creators

CreditIQ can grow through intent-led acquisition instead of heavy paid marketing.

1

Phase 1: Consumer wedge

SEO pages for best cards by category, bank, fee and lifestyle. Social content around rewards, hacks and comparison.

Traffic -> recommendation -> comparison -> application

2

Phase 2: Conversion partnerships

Partner with affiliate networks, card issuers and fintech platforms for approved applications and paid placements.

Traffic -> recommendation -> comparison -> application

3

Phase 3: Embedded platform

Offer APIs and widgets for personal finance apps, salary platforms, neobanks and wealth apps.

Traffic -> recommendation -> comparison -> application

Founder-led bank relationships and content-led acquisition create a capital-efficient GTM path.

Competitive landscape: where CreditIQ wins

Most alternatives are either content-heavy, bank-owned, or affiliate-biased. CreditIQ is interactive and user-first.

Player type	Comparison	Personalization	Reward math	Neutrality	Monetization
Bank sites	Own cards	Low	Limited	Low	Issuer sales
Blogs / creators	Manual lists	Low	Rare	Mixed	Affiliate
Finance apps	Partial	Medium	Limited	Mixed	Cross-sell
Marketplaces	Broad	Medium	Some	Mixed	Lead-gen
CreditIQ	Built-in	High	Core feature	User-first	CPA + B2B + premium

CreditIQ wins by combining structured data, recommendation flow, reward math and conversion intent.

Traction-ready product roadmap

From current MVP to category-defining personal finance decision layer.

Now

Live discovery product with 60+ cards, 12 banks, categories, filters, comparison and reward calculator.

Next 30 days

Improve recommendation logic, add application CTA routing, SEO pages and saved user profiles.

60-90 days

Connect live sheet / admin CMS, bank partner tracking, analytics dashboard and lead attribution.

6 months

AI assistant, eligibility logic, WhatsApp recommendations, renewal reminders and premium optimizer.

12 months

API/widget layer for fintech apps and expansion into loans, insurance and wealth discovery.

The roadmap compounds from a card finder into a financial-product intelligence platform.

Growth loops and defensibility

The more users compare and calculate, the better the product becomes for consumers and partners.

Search intent loop

Best credit card for X queries bring users with immediate decision intent.

Calculator loop

Reward calculation creates shareable outputs and repeat usage.

Comparison loop

Users add multiple cards, increasing data on preference and decision trade-offs.

Partner loop

Banks receive qualified leads, fund better offers and supply cleaner product data.

Data moat loop

Click, compare and conversion behavior improves recommendations over time.

Portfolio loop

CreditIQ can connect to AskGogo reminders, FoliolQ finance and Nexus shared AI infra.

Defensibility comes from structured financial-product data + behavioral decision data + partner conversion data.

Use of capital: build the category before competitors do

A lean seed allocation can turn the MVP into a scalable acquisition and partner platform.

Product & AI

Recommendation engine, eligibility logic, calculator accuracy, personalization and saved profiles.

Data operations

Bank/card database maintenance, live data sheet, admin CMS and QA process.

Growth & content

SEO pages, comparison pages, calculators, social video and creator-led distribution.

Partnerships

Affiliate setup, bank conversations, tracking links, attribution and partner dashboards.

Compliance & trust

Clear disclaimers, unbiased rankings, transparent sponsored labels and user data privacy.

Shared infra

Reuse Nexus AI infrastructure: auth, analytics, AI orchestration, dashboards and design system.

Capital requirement stays low because the first wedge is software, data, content and partner conversion - not lending balance sheet risk.

Milestones for the next 12 months

Clear execution milestones to validate product, traffic, conversion and partner economics.

MVP polish

100+ cards, clean mobile UX, accurate calculator and improved recommendation flow.

Traffic proof

SEO pages live, social launch, first 25K monthly visitors.

Conversion proof

Bank / affiliate routing active, application clicks tracked, approval funnel measured.

Partner proof

2-3 issuer / affiliate partnerships and early paid placement tests.

Revenue proof

First CPA revenue, sponsored campaigns and B2B widget discussions.

Platform proof

API/widget pilot and cross-product integration inside Nexus AI portfolio.

The goal is not just traffic - it is verified high-intent consumer decision data.

The opportunity: own the credit-card decision layer

CreditIQ can become the trusted AI-powered marketplace for Indian card discovery and reward optimization.

For consumers

Find the right card faster, understand true annual value and avoid fee/reward traps.

For banks

Acquire better-qualified users at the moment they are actively comparing and ready to apply.

For Nexus AI

A consumer finance wedge that connects naturally into AskGogo, FoliolQ and broader AI financial assistants.
