

AURA Intelligence Platform

AI-powered SaaS underwriting and deal intelligence for any institution funding SaaS

Built as the intelligence layer for banks, debt VCs, fintech lenders, PE teams, family offices and cross-border capital allocators.

Unlimited

Any company can be scored

8-Layer

Proprietary risk engine

5 min

Initial underwriting view

15x

Faster deal decisions

From a starting database to infinite possibilities: bring any SaaS company, connect your own data, and generate a lender-grade risk view instantly.

The investor thesis

AURA is not another company list. It is the underwriting operating system for SaaS capital.

THESIS

Most tools tell investors who exists. AURA tells institutions who is fundable, why, at what risk, and what to do next.

01

Discover

Find or import SaaS companies across sectors and geographies.

02

Score

Run a standardized 8-layer PD/LGD/EL risk model.

03

Decide

Generate memos, term-sheet logic and next-best actions.

04

Track

Move deals from watchlist to funding in one workflow.

One product creates leverage across multiple lending and investment workflows.

The problem: SaaS underwriting is still manual

Institutions lose speed, quality and consistency because data, risk and decisions live in different tools.

Time wasted

Analysts spend 2-3 days per deal collecting financials, market data and risk inputs.

Data costs

Multiple data subscriptions create \$100K+ annual overhead without underwriting intelligence.

No risk standard

Company lists do not provide PD, LGD, EL, DSCR, covenant logic or fundability views.

Slow decisions

Market processes take weeks; the fastest lender often wins the best founder conversations.

Fragmented workflow

Data in one place, risk in Excel, pipeline in CRM and memos in documents.

Result: high-quality SaaS borrowers are missed, delayed, or evaluated inconsistently.

The solution: one AI platform from discovery to funding

AURA replaces disconnected research, Excel underwriting and memo writing with a unified institutional workflow.

AURA Core

8-layer risk engine
AI deal workspace
Pipeline intelligence
Market benchmarks

Deal Intelligence

Search, import or connect any SaaS company profile and run fundability checks.

Risk Lab

PD/LGD/EL, DSCR, CLV, revenue quality and covenant logic in one place.

AI Workspace

Investment memos, term sheets, outreach emails and IC notes in seconds.

Pipeline & Watchlist

Track companies, conviction, next steps and portfolio analytics from a single view.

Universal applicability: anybody underwriting SaaS can use AURA

The first version can start with verified companies, but the product is built to evaluate any SaaS borrower or target.

Debt VC Funds

Prioritize inbound, size facilities and accelerate IC memos.

Banks & NBFCs

Add SaaS-specific underwriting without building a specialist team.

Fintech Lenders

Compete on speed with risk discipline and audit-ready scoring.

PE / Growth Equity

Screen buyout targets, secondary opportunities and credit overlays.

Family Offices

Evaluate direct SaaS deals with institutional-grade risk views.

Cross-Border Funds

Compare US, India, Singapore, UK and emerging SaaS opportunities.

Positioning change: AURA is not limited to 60 companies. It is a reusable underwriting layer for infinite SaaS opportunities.

AURA 8-layer risk engine

A transparent, lender-grade scoring system designed around SaaS economics and institutional underwriting.

Revenue Quality

ARR verification, recurring vs discretionary revenue, source confidence.

Unit Economics

LTV:CAC, gross margin, NRR, burn multiple and payback.

Runway

Cash runway, burn trend and capital dependency.

Concentration

Customer HHI, contract quality and revenue diversification.

Growth Velocity

ARR growth, sector-adjusted benchmarks and retention quality.

Investor Quality

VC backing, governance, follow-on capacity and cap table strength.

Sector Tailwinds

AI, security, fintech, healthtech and category momentum.

Market Position

Moat, differentiation, competition and pricing power.

AI workspace: analysis becomes output instantly

AURA does not stop at scoring - it converts underwriting into decision-ready documents and actions.

AI Deal Memos

Full investment memos with risk analysis, sector context and recommendation in under 60 seconds.

Smart Term Sheets

Draft facility sizing, pricing and covenant logic based on score and benchmark data.

Founder Outreach

Personalized outreach emails with company-specific talking points and lender proposition.

Contract-Aware Review

Read contracts to surface committed vs discretionary revenue and renewal risk.

Predictive Scoring

Composite AURA score with grade breakdown, risk drivers and recommended next action.

Real-Time Pipeline

Weighted probability, deployed capital, IC status and next-step tracking.

Senior analyst output without senior analyst delay.

Time and cost savings: the ROI case

AURA turns fragmented manual work into a standardized, repeatable, AI-assisted workflow.

Workflow	Traditional process	With AURA	Saving
Deal screening	2-3 days per deal	5 minutes initial score	98%
Analyst cost	Senior analyst time	Platform-assisted workflow	98%
Data stack	\$100K+/year subscriptions	Unified SaaS intelligence layer	76%
Risk model	Manual Excel, inconsistent	Standardized PD/LGD/EL logic	Audit-ready
Memo creation	4-6 hours per memo	AI-generated draft in seconds	99%
Decision speed	Weeks to term sheet	72-hour operating model	15x

Annual value: faster decisions + lower research cost + repeatable underwriting standards.

Product walkthrough: 4 modules, infinite company coverage

Start with verified data, then expand through imports, integrations and customer-owned datasets.

1. Deal Intelligence

Search curated companies or add any SaaS company manually. Filter by sector, ARR, geography, grade and growth.

2. Advanced Risk Lab

Run instant 8-layer scoring with formula decomposition for PD, LGD, EL, DSCR and CLV.

3. Deal Pipeline

Move opportunities from discovery to term sheet to funding with probability-weighted tracking.

4. Market Intelligence

Sector heat maps, venture debt benchmarks and competitive context for IC decisions.

Key fix: the 60+ companies are only the starting dataset - the platform is designed for unlimited SaaS underwriting workflows.

Market opportunity: SaaS capital needs a risk intelligence layer

Venture debt, revenue-based financing, bank lending and cross-border credit all need better SaaS scoring.

\$83.4B

US venture debt market

Large and expanding pool of institutional capital

\$5.78B

Revenue-based financing

Fast-growing alternative capital category

23 days

Market time-to-fund

AURA-enabled workflows target 72-hour decision cycles

2.1%

SaaS default reference

Risk differs sharply by sector and quality

6-7x

SaaS ARR multiples

Rationalized valuations create better credit opportunities

Global

Cross-border demand

US, India, Singapore, UK and emerging SaaS corridors

AURA captures the intelligence layer across this market - not just a single lender workflow.

Competitive landscape: where AURA wins

No competitor combines verified data, SaaS-specific underwriting, AI memos, speed and pipeline execution.

Platform	Data	Underwriting	AI output	Workflow	SaaS focus
PitchBook / CB Insights	Yes	No	No	Research only	Generic
Crunchbase	Yes	No	No	Discovery only	Generic
Capchase / Pipe	Own data	Algo only	Limited	Lender-specific	SaaS
Banks / funds internal	Fragmented	Manual	Manual	Excel + CRM	Team dependent
AURA	Verified + BYOD	Full 8-layer	Memos + terms	End-to-end	Purpose-built

AURA is the decision layer - not just another data source.

Pricing: value-based and enterprise-friendly

AURA is priced to be cheaper than analyst time and existing data-stack waste.

One-time setup

\$10,000 - \$15,000

- Custom instance configuration
- CRM / ERP integration
- Data migration and onboarding
- Training for up to 10 users
- White-label options
- 90-day priority support

Monthly subscription

\$2,000 / month

- Unlimited screening and scoring
- Full 8-layer risk engine
- AI memos and term sheet drafts
- Pipeline and watchlist
- Market intelligence
- Quarterly reviews and support

Customer saves analyst time and reduces data-stack dependency - creating a clear ROI case from month one.

Unit economics: scalable SaaS with strong expansion potential

Per-customer economics improve as data licensing, AI usage and support scale across the base.

Revenue per customer

\$2,000 / month

Recurring subscription before setup fees

Estimated cost

\$1,100 - \$1,780 / month

AI, data, hosting, support and maintenance

Gross margin

45% - 55% initially

Improves with volume discounts and optimized AI usage

Net profit

\$220 - \$900 / customer / month

Before enterprise expansion, API and white-label upside

Expansion levers: enterprise seats, white-label instances, API access, custom models and sector intelligence packs.

Go-to-market: land, expand, become the standard risk layer

A focused B2B motion with direct founder-led selling into high-value institutional customers.

Phase 1: Land

Target 10-15 debt VC firms, fintech lenders and cross-border funds. Sell setup + subscription. Goal: 10 customers / \$220K ARR.

Founder-led outreach -> pilot -> annual contract -> expansion

Phase 2: Expand

Add banks, PE teams and larger institutions. Introduce white-label, API access and sector intelligence. Goal: 25 customers / \$550K ARR.

Founder-led outreach -> pilot -> annual contract -> expansion

Phase 3: Platform

Become the default SaaS underwriting layer. Data partnerships, benchmarks and marketplace. Goal: 100 customers / \$2.2M ARR.

Founder-led outreach -> pilot -> annual contract -> expansion

Target: \$2.2M ARR by Year 2 with a self-improving risk moat.

Proof points and product maturity

AURA is built around a real lending workflow and can scale from curated data to customer-owned intelligence.

250+ funded founders

Benchmarking base that informs risk patterns and repeat-founder behavior.

72-hour funding motion

A speed benchmark that AURA productizes for institutional workflows.

\$500K - \$5M tickets

Sweet spot where SaaS underwriting precision materially changes outcomes.

11-15% rates

Pricing discipline supported by risk transparency and speed.

60+ starting companies

Initial verified dataset - not the limit of the platform.

Infinite coverage model

Users can add, import or integrate any SaaS company for scoring.

The strongest deck message: AURA starts curated, but scales as a universal SaaS credit-intelligence platform.

The opportunity: partner with AURA

The intelligence layer for SaaS capital allocation - built for speed, repeatability and institutional confidence.

For investors

Back a platform replacing multiple tools, manual analyst effort and disconnected underwriting workflows.

For partners

White-label AURA for your institution with custom risk models, branded workflows and dedicated support.

For the market

Faster, smarter and fairer capital allocation to SaaS companies across markets and stages.
