Seed Round: INR 2 Crores (~\$240K)

The problem: India has AI access, but not AI habit

The assistant market is fragmented across apps, languages and workflows. WhatsApp is the missing distribution layer.

App fatigue

Users already juggle 15+ apps. Every new AI product creates download, login and onboarding friction.

Memory gap

Current assistants do not remember a user across reminders, notes, bills, travel, expenses and follow-ups.

Language barrier

Most AI tools are English-first while India is voice-first and multilingual.

Workflow fragmentation

Reminders, notes, bills, expenses, news and tasks live in different tools with no single memory.

Trust + payments gap

Indian consumers need UPI-native utility, not just generic chatbot responses.

No daily AI habit

Most assistants are impressive demos, but not an everyday operating system.

The winner will not be the smartest standalone app - it will be the assistant that becomes a daily habit.

The solution: AI inside the app Indians already use

AskGogo turns WhatsApp into a personal operating system for reminders, notes, tasks, bills, expenses and daily intelligence.

- 01

Save the number

No signup friction. Users start chatting instantly.
- 02

Ask naturally

Text or voice note in everyday language.
- 03

Memory graph

Gogo remembers context, preferences and repeated habits.
- 04

Action layer

Reminders, notes, bill split, follow-ups, news and tasks.

No new app. No complex prompts. Just ask naturally.

Product: 12 superpowers inside one WhatsApp chat

The product is designed for daily utility first, monetization second, and memory as the long-term moat.

Reminders

Recurring, contextual and natural language

Notes

Save, search and recall personal notes

Bill split

Group expenses with UPI-ready prompts

Daily tasks

To-dos, priorities and follow-ups

News

Personalized daily briefing

Voice

Speak in any language

Travel

Plan, store and remind

Docs

Image/PDF reading and summarization

The product wedge is reminders + memory. The platform opportunity is the personal AI OS inside WhatsApp.

Voice-first India: built for how Indians actually use WhatsApp

AskGogo supports the natural behavior of Indian users: voice notes, mixed languages and simple commands.

10+

Indian languages

0

New app downloads

24x7

Chat utility

Hindi + English

"Kal 8 baje water bill remind karna"

Voice note

Send a natural voice note instead of typing.

Family use case

Shared bills, lists, reminders and household tasks.

Founder use case

Follow-ups, meeting notes, reminders and daily briefing.

This is not a chatbot. It is the WhatsApp-native action layer for daily life.

Market opportunity: India is ready for a WhatsApp-native AI assistant

AskGogo sits at the convergence of WhatsApp scale, vernacular internet, UPI behavior and falling AI costs.

AI assistant market by 2034

20.23%

Market CAGR

850M

Indians online

Why now

- WhatsApp is the default communication OS
- UPI made digital payments habitual
- LLM costs are falling rapidly
- Indian language internet is expanding
- No dominant Indian consumer AI assistant yet

Market position

AskGogo does not need to create a new category or a new user habit. It rides on WhatsApp behavior and converts it into daily AI utility.

Large market. Familiar interface. Daily use case. Low-friction conversion.

Competitive moat: memory + distribution + India localization

Every new user makes the product smarter, stickier and harder to replace.

Memory graph

Persistent personal context across reminders, notes, bills, tasks and daily briefing.

AskGogo AI

WhatsApp-native AI OS

India language stack

Voice-first support for Hindi, Hinglish and Indian regional language flows.

Zero-friction distribution

No app. No login. Users start with one WhatsApp message.

Network loops

Bill split, shared lists, family tasks and referrals create product-led growth.

The moat compounds through context, habit and language - not just features.

Competitive landscape: consumer-first, WhatsApp-native and India-priced

AskGogo combines personal AI, memory, Indian languages and UPI-native workflows at a consumer price point.

Feature	AskGogo	Memorae	Zapia	WATI	ChatMaxima
Target	Consumer	Consumer	Consumer	B2B	B2B
Platform	WhatsApp	App/Web	App	Dashboard	Dashboard
Memory	Graph-based	Basic	None	None	Basic

Break-even users

Go-to-market: viral utility before paid conversion

The GTM wedge is simple: try it, share it, make it useful daily, then convert to Pro.

01

Founder-led launch

WhatsApp demos, LinkedIn, Product Hunt and early users.

02

Viral use cases

Bill split, shared reminders, family tasks and voice notes.

03

Subscription conversion

₹99 entry plan and Pro/Founder Pro upgrades.

04

Institutions + teams

Pilots for hostels, colleges, communities and small teams.

The first 1,000 users prove habit. The next 10,000 prove monetization. The next 100,000 prove platform.

Seed round: INR 2 crores (~\$240K)

18-month runway to product-market fit, paid conversion and institutional pilots.

AskGogo AI is part of Nexus AI: shared infrastructure, shared execution team and capital-efficient product building.
